Summary

Principal AI leader with 10+ years directing cross-functional AI teams and scaling GenAI products to enterprise impact. Leads teams of data scientists and AI engineers, partnering with Product and Engineering to take AI capabilities from research to production. Architecting production-grade ML systems and full-stack agentic systems (multi-agent orchestration, RAG, LLM-as-judge evaluation) grounded in a quantitative PhD background. Established AI governance frameworks and MLOps practices now serving 65+ clients, delivering $60M+ in operational cost savings.

Skills

Leadership: Cross-Functional AI Leadership, Team Building & Mentorship, Strategic Planning
ML: Predictive Modeling, Anomaly Detection, Bayesian Modeling, Time-Series Analysis, Reinforcement Learning
AI / GenAI: LLMs, Agentic AI Architecture, Multi-Agent Orchestration, RAG, LLM-as-Judge Evaluation, Tool-Use/Function-Calling, Multi-Provider LLM Integration
Platform: GCP Vertex AI, Neo4j, Vector Stores (pgvector), MLOps, CI/CD, Python, TypeScript/Node.js
Governance: AI Governance (AIGP), Auditability, Risk & Project Management (PMP)

Experience

- **Trinnex (CDM Smith)** — Canada/USA
  Principal / Lead Data Scientist — *2022 – Present*
  - Architected and scaled an enterprise ML platform (grown from initial pilot) serving 65+ critical infrastructure clients, delivering $60M+ in operational cost savings through predictive risk modeling and anomaly detection. Built end-to-end on GCP Vertex AI with BigQuery as the primary data layer; reduced deployment cycle from 4–6 weeks to same-day releases through disciplined CI/CD, model versioning, and automated validation pipelines.
  - Designed and deployed three production GenAI applications using agentic orchestration: a RAG-based internal knowledge retrieval system for structured decision support; an AI-powered code analysis agent autonomously reviewing pull requests and generating structured remediation, compressing review cycles from days to hours; and a competitive intelligence platform combining web retrieval, tool use, and structured LLM outputs.
  - Implemented a tri-agent dialectic validation framework (prosecutor / defender / adjudicator) as a production LLM-as-judge evaluation architecture for ML feature validation and data-leakage detection – applying adversarial prompting, function calling, and structured output contracts to automate a review process previously requiring senior data scientist judgment.
  - Led a technical team of 4 data scientists and AI engineers; established end-to-end ML development standards and pioneered an AIGP-certified AI governance framework embedding traceability, auditability, and incident response into the ML lifecycle. Created the "SEAL 6" knowledge-sharing methodology to scale team capabilities and shape the agentic AI product roadmap.

- **Polytechnique Montréal** — Canada
  Research Assistant (Full-time) — *2018 – 2022*
  - PhD research applying reinforcement learning, imitation learning, and Bayesian state-space time-series models to real-time infrastructure anomaly detection; established a research-to-production methodology and reproducible ML pipelines that became the foundation for subsequent enterprise AI work.

Selected Independent Projects

- **AI Governance & Readiness Assessment Pipeline** — Independent
  Solo Developer (Prototype) — *2025 – Present*
  - 5-node multi-agent pipeline (intake → regulatory research → plan generation → adversarial verification → deliverable generation) with a provider-agnostic LLM abstraction layer (Gemini, OpenAI, Groq, Mistral) and model-per-node routing.

- **Graph-Intelligence Agentic AI Platform for Infrastructure Risk** — Independent
  Solo Developer (Prototype) — *2025 – 2026*
  - "Agents-as-product" architecture on Neo4j: five specialist agents plus an orchestrator, shipped under a self-imposed Evaluation-Driven Development (EDD) discipline with automated LLM-as-judge eval runners gating production readiness.

Certifications

- **Artificial Intelligence Governance Professional (AIGP)**, *IAPP* — *2026*
- **Project Management Professional (PMP)**, *PMI* — *2026*
- **Google Project Management Professional**, *Google* — *2025*

Education

- **Polytechnique Montréal** Canada
  PhD, Civil Engineering (Artificial Intelligence) *2022*
  - Focus: Reinforcement Learning, Imitation Learning, Bayesian Modeling, Probabilistic Decision-Making.
- **Sharif University of Technology** Iran
  MSc, Civil Engineering (Applied Mathematics) *2012*
